

To Whom It May Concern:

I am currently a satellite radio subscriber (XM). I signed up for satellite radio service because of its superior sound quality and its various forms of entertainment. Being a fan of all styles of music, I (until recently) have really enjoyed the musical variety offered by satellite radio. Recently, XM has set up more localized programming that I'm NOT in agreement with.

I believe that traditional terrestrial radio broadcasters should continue, on its own, to carry the localized programming (like only THEY can). I support satellite radio for its entertainment value. This is why I subscribe to this type of service.

Not all people have access to satellite radio. In these days of terrorism and incases of natural disaster, normal FM broadcasts are what most people have access to. Destroying this method of communication would be disasterous to the FM broadcast industry. I therefore am in favor of NAB petiton 04-160.

Please, return satellite radio's entertainment value to me and the hundreds and thousands of other listeners who subscribe to it.
